

1. A light system installed in a hand carried carrier having various items stored therein, said carrier having a closeable top opening therein and a closed bottom, said closed bottom having a circuit of strings of lights placed therein to shine upwardly into said stored items therein, a power source to power said strings of light including a switch being included in said circuit, said switch being operable to turn said lights off and on.

2. The light system of claim 1 including another string of lights being placed intermediate said string of lights by way of connectors.

3. The light system of claim 2 including light bulbs placed within said connector.

4. The light system of claim 1 wherein said light system is placed at said opening of said carrier to shine downwardly into said stored items therein.

5. The light system of claim 1, wherein said carrier is a conventional handbag.

6. The light system of claim 1, wherein said carrier is an attaché case.

7. The light system of claim 2, wherein said connector is a three-way connector.
